Weather Description -- Please note this is location-specific to Ocho Rios. In as little as ten miles away, weather conditions could be much different than this forecast.

23-Sep-06
Some early day cloudiness and mist will burn-off to give quite a bit of sunshine after late morning. PM temperatures will be very muggy.

24-Sep-06
After some glimpses of sunshine during the morning, clouds will roll-in and lower during the evening hours. A light shower is possible late.

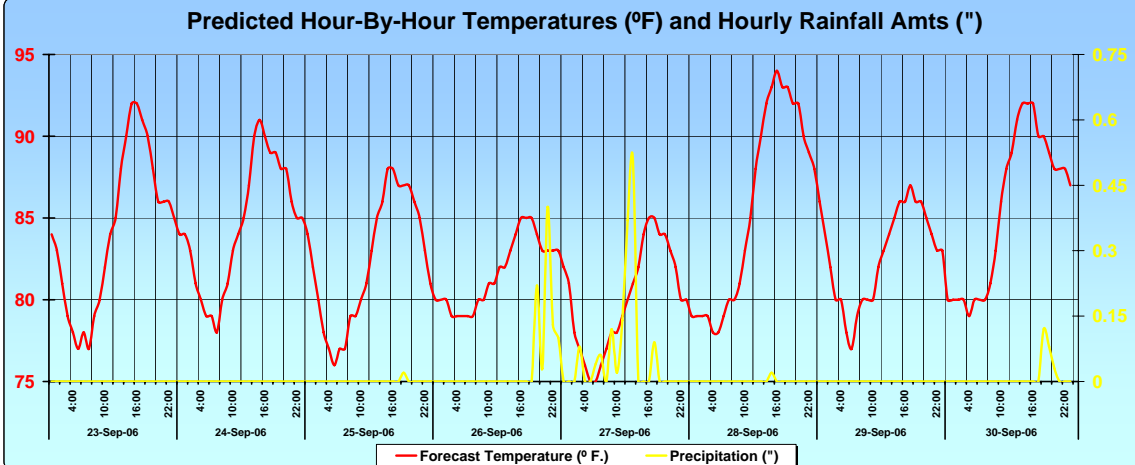

25-Sep-06
Limited sun early then overcast for the area most of the day; hotter early, windy at times then some strong thunderstorms in the eve.

26-Sep-06
Cooler; expect a tropical wave to move through with heavy rain likely; windy conditions during thunderstorms around the midday period.

27-Sep-06
Low cloudiness will dominate again, although there is much less threat of any precipitation. Expect a return to heat and high humidity.

28-Sep-06
Fair then sunny followed by a few clouds from time to time. Much nicer with a refreshing breeze, although it will be calm near to sunset.

29-Sep-06
Notably much hotter again with more humidity. Clouds rolling back late in the day with a few late afternoon showers becoming heavier late in the day.

Decisions, uses & actions based on this forecast is at the user's risk. Be advised that complexities though do occur in the atmosphere; that is, future weather events are subject to inherent limitations and cannot be guaranteed. No warranty is either expressed or implied regarding the content or accuracy of this product; however, historically, AFC's forecasts have a 91% accuracy on precipitation (measurable amount -- yes/no) and a 92% accuracy on average temperature (within +/-2.5F).
